Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 4 and 13, are rejected under 35 U.S.C. 102(e) as being anticipated by Kanota et al.

Kanota et al discloses a video recording/reproducing apparatus that shows all the limitations recited in claims 4, and 13, including the feature of receiving composite synchronizing signal and detecting therefrom a copy-preventing signal (See Kanota et al's Figure 21, components 10, and 14), and the feature of generating a recording-prevention control signal adapted to stop a recording of the content embodied in the video signal when a copy-preventing signal is detected by the first means as specified in the present claims 4, and 13. (See Kanota et al's column 10, lines 44-46, and column 11, lines 15-22), and furthermore, the feature of indicating detection of the copy-preventing signal when a pulse count value in a predetermined interval of the composite synchronizing signal is not less than a predetermined threshold value as specified thereof is also present in Kanota et al. (See Kanota et al's Figure 21, components 19-20, and column 10, lines 11-21).

3. Claims 1, 3, 5-8, 10, 12, and 14-15 are allowable over the prior art of record.
